

# Component Publisher™

## Standard, Reusable Information Components for Microsoft Word

### Produce better and more customizable documents at lower cost.

Apply Live Linx Component Publisher to produce more accurate documentation, and more customizable documents in significantly less time. Update and manage documents faster, easier, more reliably and at lower cost.

Create content for reuse in different documents without formatting worries. Component Publisher formats each information component to the template of the host document.

### True single-source. Edit once; update everywhere.

Component Publisher stores content chunks as "information components", allowing re-purposing components in multiple documents. When editing is required, just update once. The changes apply globally to all documents that use the component.

Component Publisher delivers the most flexible way to author content while keeping your authors and content in Microsoft® Word. Reuse content across many documents and page designs. Make global changes with just one edit.

### Component Publisher meets real-life challenges.

Component Publisher works with your Microsoft Word templates, requires no special tools or training, is easy-to-use, and requires no IT support. Write an information component once in Microsoft Word and use the component in many documents.

QA and engineering staff save time, by reviewing each component only once instead of many times in many documents.

### Variable information in Component Publisher.

A component can also include variables that update according to the host document. For example, product names, captions and numbering automatically adapt to the host documents.

### Measure Your Information Component Quotient

Do multiple technical or sales documents in your organization repeat information?

Do you need an easy way to manage or leverage standard information?

When standard information items change, do you need to update many documents? Do you need a solution without waiting for corporate IT support and approval of mega budgets?

Do you need an easy way to reuse, manage, and update information repeated in many documents?

If you answered Yes to the above questions, then Component Publisher is your solution.

## Expandability

When you need to support staff working from multiple locations, Component Publisher easily scales to the Live Linx ConteX server for a full-service web content management and publishing system. Use Component Publisher in tandem with Live Linx Qualidocs for QA on Microsoft Word documents.

## Requirements

Microsoft Word 2000, Microsoft Word 2002 or Microsoft Word 2003.

## The Next Step
